PROFILE

Computer Science student specializing in Data Engineering and Real-Time Data Processing with hands-on experience building ETL pipelines, streaming architectures, cloud-based data lakes, and automated workflows. Skilled in Python, SQL, Apache Kafka, Apache Airflow, AWS S3, and MySQL with experience developing scalable analytics systems, real-time monitoring dashboards, and production-style data engineering projects.

CORE SKILLS

Languages	Python, SQL, Java, C++, Bash
Data Engineering	ETL Pipelines, Data Warehousing, Data Lakes, Data Cleaning, Aggregation
Streaming & Automation	Kafka basic, Apache Airflow, Docker Compose
Databases	MySQL, SQL Joins, Window Functions, Query Optimization
Cloud & Analytics	AWS S3, Amazon Athena
Tools	Git, Docker, VS Code
Currently Learning	Apache Spark, AWS Services

EXPERIENCE

Data Science & Analytics Intern — [DevelopersHub Corporation \(Remote\)](#) | Feb 2026 – Mar 2026

- Worked on ML classification models using real-world datasets.
- Performed preprocessing, feature engineering, and model export using Pickle.
- Gained hands-on experience with analytics workflows and data processing.

PROJECTS

■ Real-Time Cyber Threat Detection Pipeline

Technologies: Python, Apache Kafka, Apache Airflow, MySQL, AWS S3, Amazon Athena, Flask, Docker

- Designed a real-time streaming architecture using Kafka producers/consumers to process simulated web server logs with malicious traffic.
- Built a rule-based threat detection engine for SQL injection, XSS, brute-force, and directory traversal attacks with live alerts.
- Stored structured logs in MySQL and raw JSON logs in AWS S3 partitioned for scalable querying using Amazon Athena.
- Developed a Flask dashboard with live alerts, attack statistics, and time-series visualizations.
- Automated hourly aggregation and monitoring workflows using Apache Airflow DAGs and Docker Compose.

[GitHub: Complete-real-time-cyber-threat-detection-pipeline](#)

■ Pakistan Flood Risk Monitoring System

- Built an end-to-end automated ETL pipeline using Apache Airflow, fetching real-time weather data from OpenWeatherMap API and historical flood data from FAO Pakistan.
- Implemented a risk scoring algorithm based on temperature, humidity, and rainfall; stored results in MySQL and triggered email alerts for high-risk cities.
- Developed an interactive Streamlit dashboard with filters, charts, and data export for real-time flood risk visualization.

[GitHub: airflow-flood-early-warning-system](#)

■ Customer Transactions Data Warehouse

- Designed a mini data warehouse using SQL window functions for analytics.

[GitHub: Customer-Transactions-Data-Warehouse](#)

■ Daily Sales Aggregation & Reporting Pipeline

- Automated daily sales reporting using Python and SQL transformations.

EDUCATION

BS Computer Science	National Skills University, Islamabad	2023 – 2027
FSc Pre-Engineering	Punjab College
